²⁾ Irradiance 1,000 W/m², Air Mass 1.5, cell temperature 25 °C, PV modules show a degradation of the electrical values. This is degressive first of all after commissioning and then switches to linear.

³⁾ Irradiance 800 W/m², ambient temperature 20 °C, wind speed 1 m/s. All electrical characteristic parameters, with the exception of the rated power, are subject to a tolerance of +/- 5 %. The electrical characteristic parameters are typical values based on the performance data of produced modules. The accuracy of the data for future production batches cannot be guaranteed.
